

The shape of things to come...

# At last, side road lighting has the **balance** just right.

Leaving the competition behind comes a modern classic combining white light comfort and security, cutting edge performance, energy saving and near total recyclability.

## **Clearly better for the community**

White light is proven to enhance quality of life for the whole community. Discouraging crime, improving traffic safety and helping to make people feel safer in their streets. Balanced, of course, with due sensitivity to possible light intrusion on residents and the dark of the night sky - Libra fully conforms to the glare classes of EN 13201.

## **Making life easier for the installer**

When it comes to installation and maintenance, there's no lantern simpler or more cost-effective than Libra. The lantern has an 840 colour lamp fitted as a standard. The canopy bowl is positively hinged all the way across one side for safer maintenance and three stainless steel clips swiftly access the interior. Once inside, the plug-in gear tray is also hinged for extra easy maintenance.

## **Outshining the competition**

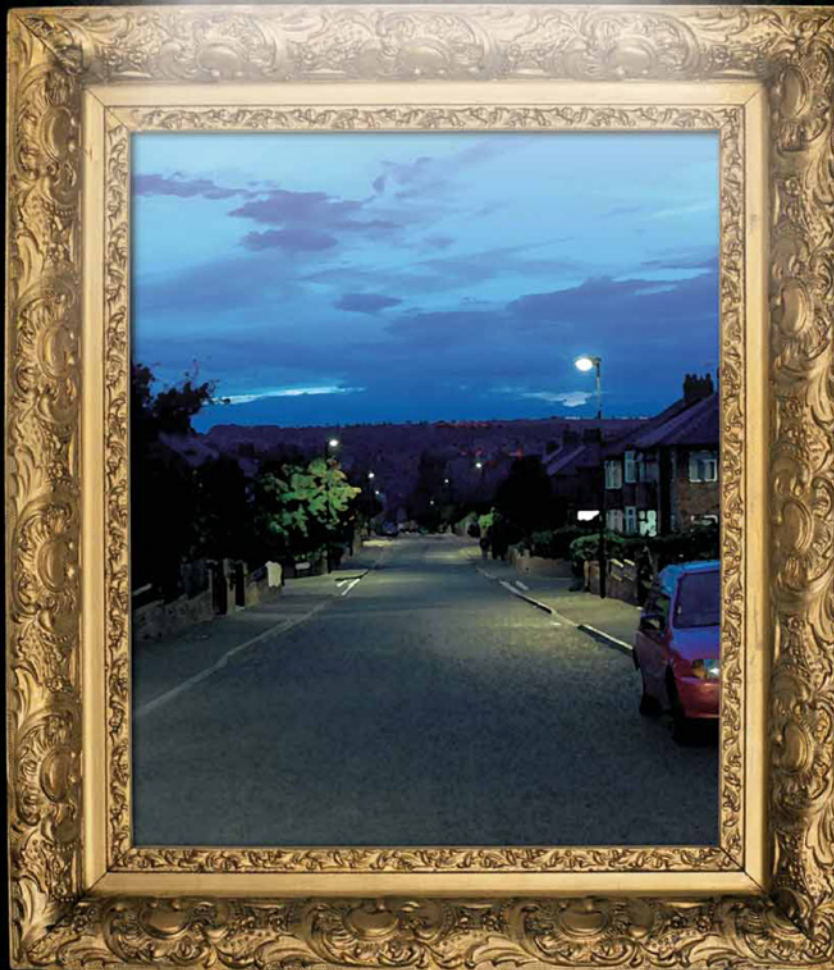

Libra is rated IP65 throughout with a seawater resistant housing to boot! So, if you're looking for a fully recyclable, aluminium, UV resistant, IK08 vandal resistant housing, then look no further – the longer lasting, better looking Libra is at your service.

**LIBRA**

LIBRA

A modern classic of lasting performance, sleek design and near total recyclability.
